

Robots Guide People in New York MTA

Amena Algroon

Abstract

The Metropolitan Transportation Authority is the largest transportation network in North America. I will officials in SoftBank will be provided with data on stations, crowded locations, and peak times so that they can increase the number of robots(Pepper) for the help of the passengers of each train and provide them with crowded stations to help more people

Pepper 'humanoid' robot to guide the people who are lost in New York stations.

From my first impression, we get an answer for, what are the top crowded stations in MTA?
